

Mini Guide Functional Testing: Governance based on testware metrics

What to do when you want to outsource your testing service to a Test Factory?

About Nesma

Ton Dekkers

- Nesma | President
- Interdependent | Software Cost Engineer
- ISBSG | Past President Board
- COSMIC | IAC member

Partners

- Galorath | US
- Leda | ES
- Metrieken.nl | NL
- PRICE systems | UK

The renewed website is organized into 6 themes:

- Benchmarking
- Outsourcing
- Productivity
- Project Control
- Estimation
- Sizing methods

Vision

- nesma is the not-for-profit organisation in the area of predictability of the cost of the delivery and the maintenance of software
- nesma joins as much as possible existing standards with a different focus than measurement
- nesma connects surrounding attention domains
- nesma is independent from customers and suppliers

Nesma Miniguide's

Software metrics in contracts

- 1. Guideline for metrics in contracts (resume)
- 2. Development methodologies;
- 3. Maintenance;
- 4. Management;
- 5. RFP Questions;
- 6. Functional Quality;
- 7. Pricing Mechanisms;
- 8. Technical Quality;
- 9. Assessing Suppliers Performance;
- 10. Software Metrics in Contracts;
- 11. Requirements for Supplier organizations;
- 12. Requirements for Customer organizations.
- 13. Functional Testing

What to do to mitigate problems?

Four Stages during the testing outsourcing process to mitigate the problems :

- RFP preparation: before the RFP adjudication
- RFP adjudication: during the RFP adjudication

- Service Operation: during the operation of the outsourced testing service
- Close/Renewal of service: during the termination or renovation of the outsourced service

RFP preparation

RFP adjudication

Service Operation

Close/Renewal of service

Getting reference values of testing activities

Define testing service payment model

Define Testware estimation model

Define testing ecosystem conditions of outsourced service

Sizing of human Resources needed

Selection of possible suppliers

Justify savings with outsourcing to testing factories

RFP preparation

Getting reference values of testing productivity

Define Non subjective payment model

Define size estimation model of the project

Define outsourcing location

Sizing of testing resources

Analyze the size and business focus of the suppliers needed

Justify savings in time

Getting reference values of testing effectiveness

Define testing service ROI model

Define size of testware

Define model of outsourcing testing factory

Sizing of defect removal resources

Ask for a RFQ to no more than six suppliers

Justify savings in Quality

Getting reference values of current testing cost

Define bonus/penalty scheme

Define test effort estimation model

Define testing level to be outsourced

Test design, Test execution,
Test automation

Justify savings in €

Function Points tested or any other functional size metrics

exo O

Function Points or any other functional size metrics Define Defect removal effort estimation model

Enhancement detail of documentation needed

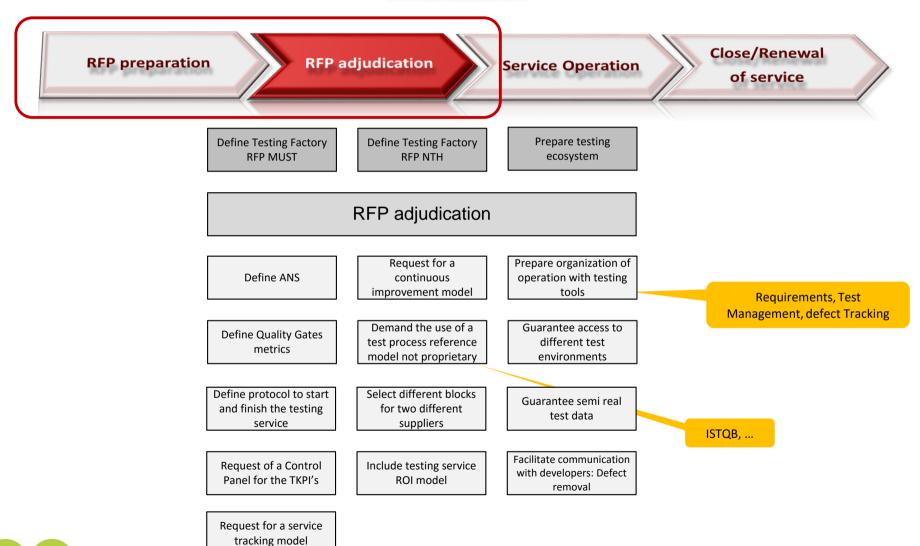

MADRID, JUNE

Designed test case, expected to be detected defects, expected incidence in production (during the guarantee period and Quality debt)

MADRID, JUNE 2016

ledamo

RFP preparation

RFP adjudication

Service Operation

Close/Renewal of service

Control testing metrics (TKPI's)

Audit the outsourced testing service

Establish model to reduce the testing resource needed

Extrapolate possible evolution of the final quality results

Service Operation

Control testing productivity

Audit the level of details of the test case designed

Enhancement of the testing activities in the testing levels

Related with Quality
Gate and compared
with initial estimation

defects in the next testing phases

Control testing effectiveness

Audit the test coverage, depth and risk of test designed

Automatize tracking service, quality and governance reports

Propose evolution needed to get the committed results

Propose possible new

and more realistic

commitments

dates and quality

Compare the TKPI's metrics by area (block), supplier, technology,

Audit the effectiveness of the testing service

Control Impact of rotation of the hhrr assigned to the service

Translate TKPI's evolution to economic data

Compare the TKPI's metrics by month and year

MADRID, JUNE 2016

impact in the

quality,

performance and

effectiveness of the

testing service

RFP preparation RFP adjudication Serv

Service Operation

Close/Renewal of service

Economical review

Prepare next period of service

Close

Renewal

Close/ Renewal of service

Analyze ANS results

Estimate new needs for next period

Execute transfer plan to new supplier

Fix new TKPI's target for next period of service

Perform ROI report of the testing service

Define target of enhacement

Perform continuous improvement model (TMMi)

Perform bonus/penalty scheme

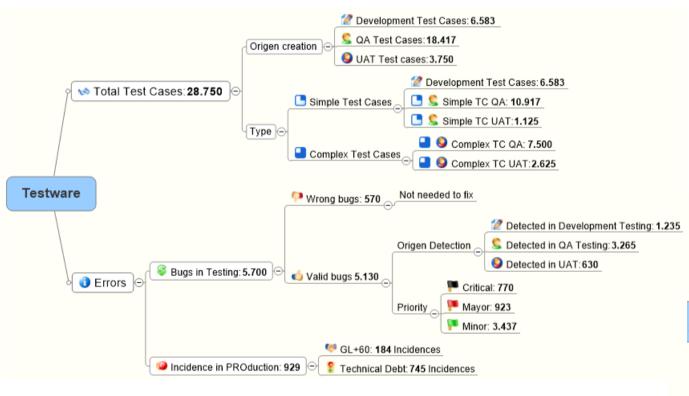

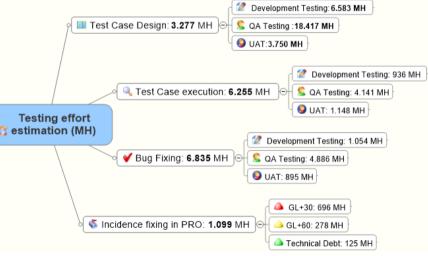

RFP Preparation: Test-ware estimation

Early test-ware size and effort estimations

Examples

RFP Preparation: Sizing of testing resources **expo**

Effort (MH)				Know data				Estimation for 100% resources	Simulation for less resources	
	Effort (MH) estimated	Start date estimated	End date estimated	# Man Days	Days available	Hours available	Resources needed	# lower resources estimated	Lower coverage accepted	
QA	Team	9.524								
Design Test Cases	Testing Factory	4.484	15/09/2015	01/11/2015	34	67	272	16,49	8,5	51,56%
Execution Test Cases	Testing Factory	5.040	01/11/2015	31/12/2015	44	67	352	14,32	7,5	52,38%
